PC → desktop → IP config → static
Click subnet mask → close
Configure DNS
Set IP → 192.168.0.1

Testing
→ Send packet - How?
PC → desktop → Command Prompt →

TTL = Time To Live (starts of Packet)
of hop counts (for Device & hop)
Max 255 (0 to 255)

192.168.15.32

DHCP Servers
Dynamic Host Configuration Protocol Server

DHCP

End-device - Generic

Take a simple PDU → select "Sender Device" "Receiver"

click DHCP → services → click DHCP

SWITCH → 2960 → Feature → AutoMDIX

(Crossover or straight through both works.)
