

CSE347: Information System Analysis and Design

Lab 07

(Designing Component Diagram and Deployment Diagram)

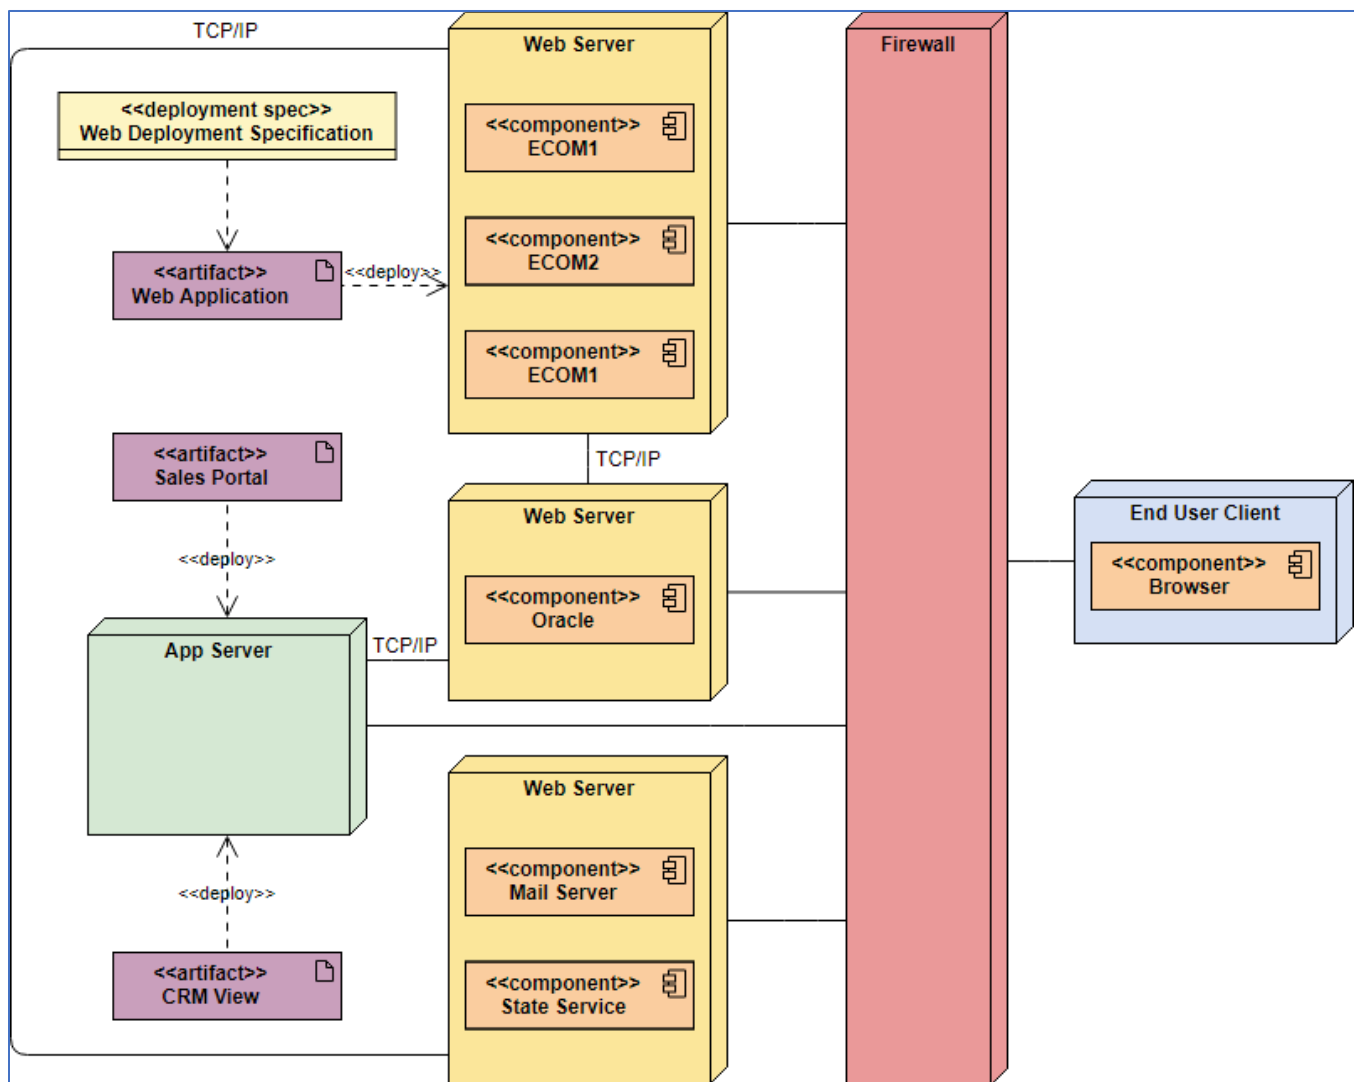

1. This lab will be based on your mini project scenery.
2. Take the scenery and the previously drawn designs to complete your designs for this lab. The final diagram will be:
3. Component diagram:

First divide the scenery into some components and their interfaces. Determine which of the interfaces are provided and which are required (in respect to the components). Then complete the diagram. You can use the slide from the lecture for further queries.

4. Deployment Diagram:

This one will vary application to application. But the main nodes will be (generally)- Application server, web server, database server and end users. After finding the node determine the artifacts for your project. Keep it simple as we are designing a prototype only. You can take help from the slides or the following diagram-

5. It will be a group lab work and a group submission.
