(a)

A set of applications (products) should ~~to~~ implement the same design rules. It is the golden rule ³ ~~3~~ ~~who~~ ~~under~~ which is make the interface consistent. It is under maintain consistency across a family applications. It means application family should follow some design, common rules and consistency. Like - ms family.

(b)

The normal users should not aware about operating system, file management functions and other technology used in the system. It is golden rule 1 which is Place the user in control. It is under hide technical internals from the casual user. It means normal user should not interact with the technology, language, tools, Database directly. It should be hidden.

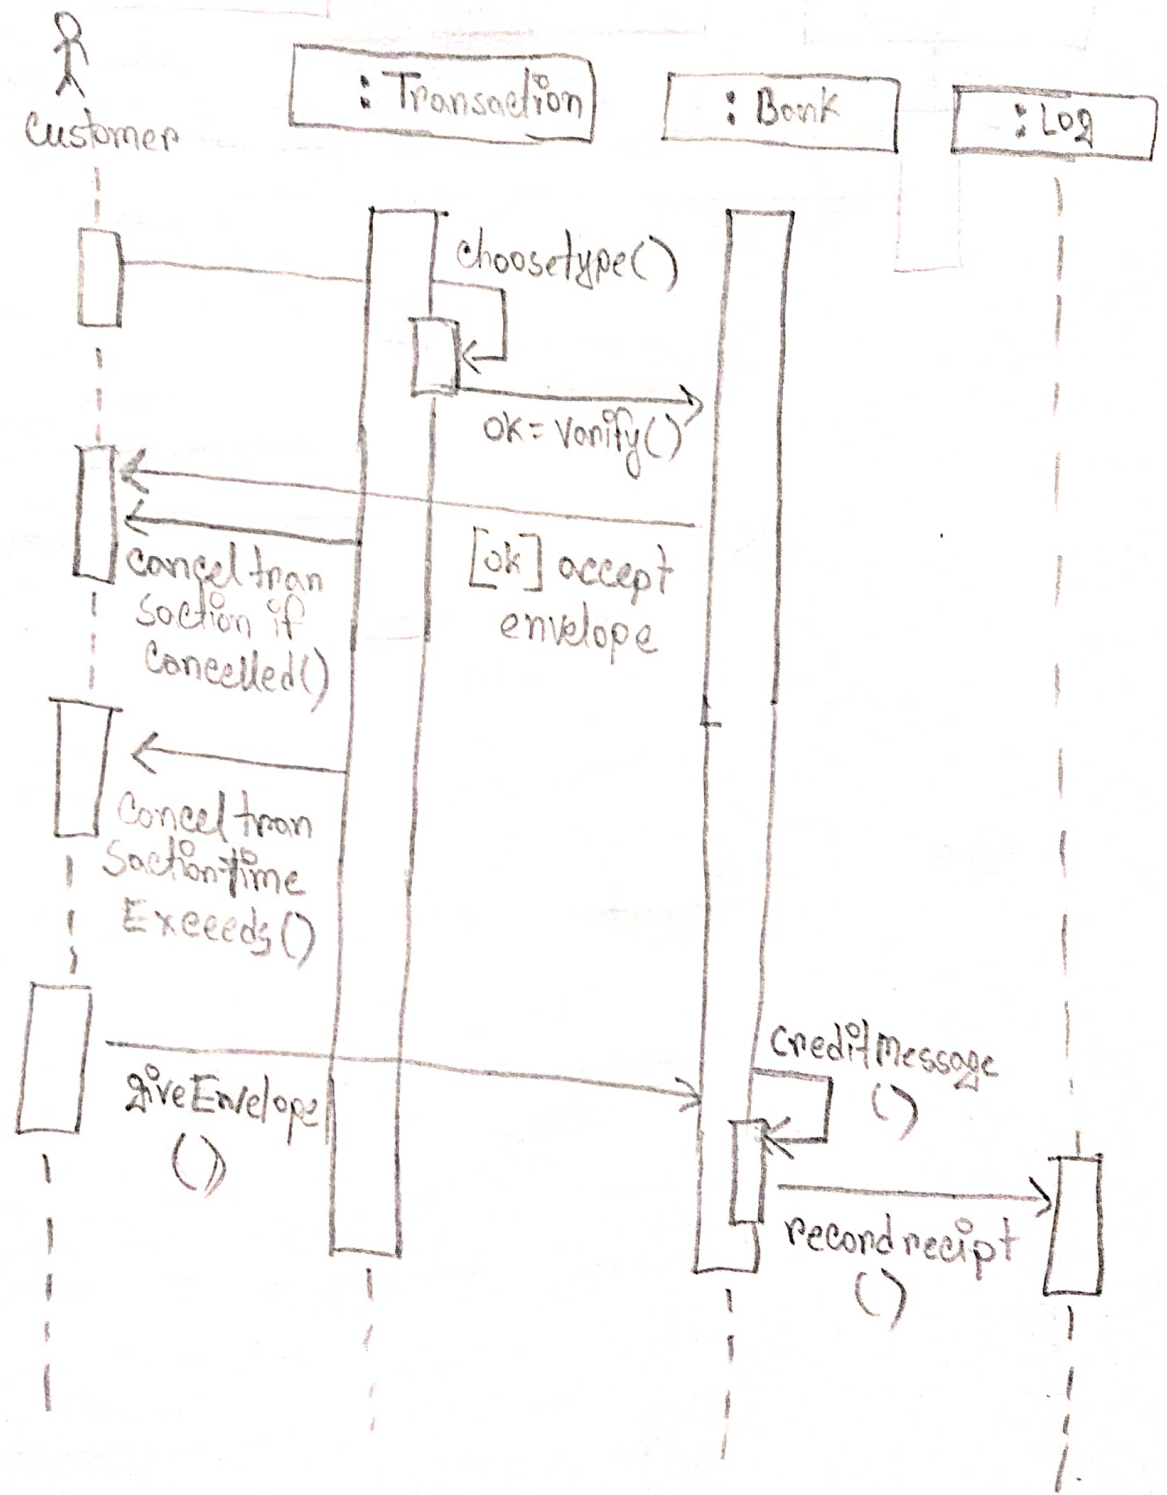

(2)

(c)

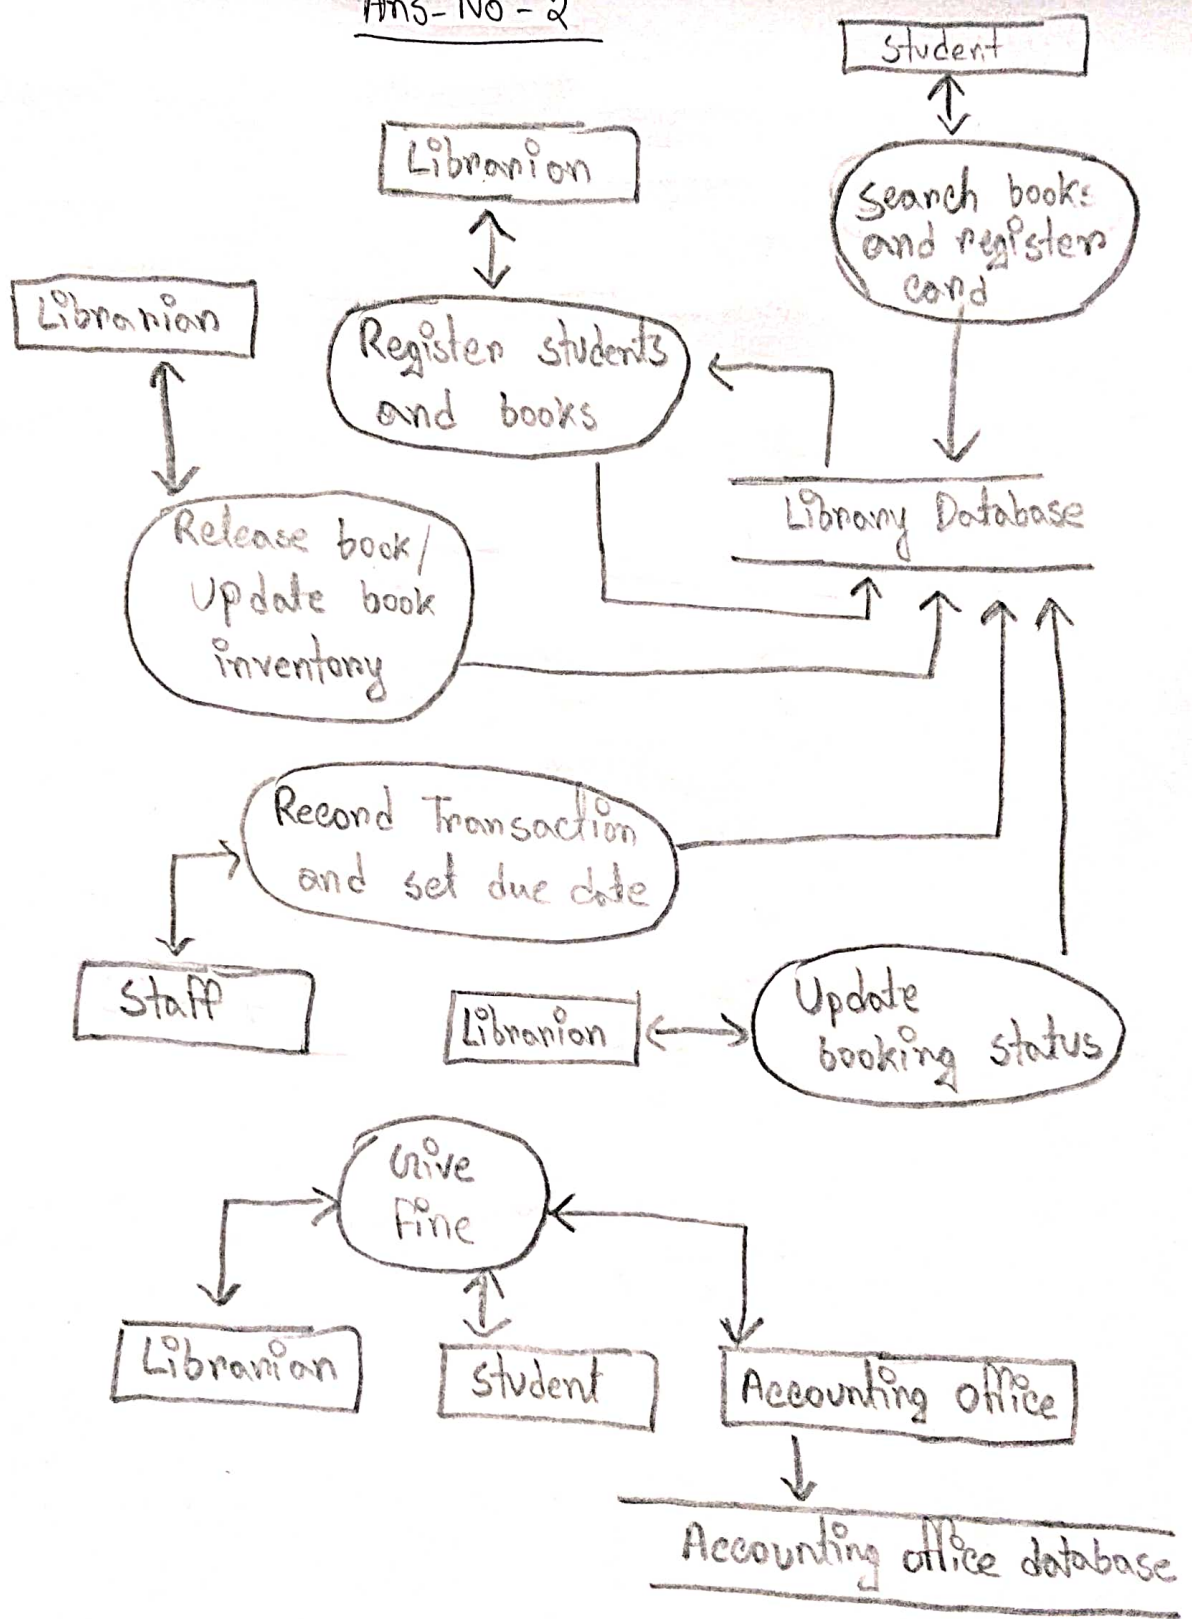

Accomplish a system function, the mnemonic should be tied up with the option in such a way that is easy to remember. It is under golden rule 2 which is reduce user's memory load. It is under define shortcuts that are immediate when mnemonics are used to. It means ~~at~~ alt + P define it will print. One should not use other alphabet here, ^{otherwise} ~~so that~~ it will make confusion for user. So ~~the~~ the shortcuts should be user friendly which is easy to remember.
